

**REPLACEMENT ABSTRACT**

~~An object of the present invention is to provide a game machine having high data management ability. In order to achieve this object, the~~ A game machine (10) of the present invention includes a card interface (11) configured so that a magnetic card (20) is detachably attached thereto, ~~card ID recording means~~ an element (12) ~~for recording to record~~ a card ID generated on the basis of time information specifying the date and time when the magnetic card (20) is attached to the card interface (11) in a magnetic data recording area (22) provided in the magnetic card (20), and ~~printing means~~ an element (14) ~~for printing to print~~ an access code uniquely obtained by the calculation of a predetermined function based on the card ID in a printing area (21) of the magnetic card (20).
